

Lesson 13: Future Continuous (will be doing) and Future Perfect (will have done)

Introduction to Future Continuous and Future Perfect

"Hello and welcome. Today's lesson will cover the future continuous tense ('will be doing') and the future perfect tense ('will have done'). These tenses are very useful in the IT field for discussing future activities and accomplishments.

Future continuous is used to talk about actions that will be in progress at a certain point in the future. For example, 'Tomorrow at 10 AM, I will be meeting with the development team.' It shows an action that will be happening at that specific time.

Future perfect is used to talk about actions that will be completed before a certain point in the future. Like, 'By the end of this month, we will have completed the software update.' It indicates that the action (completing the software update) will be finished before the specified time (end of the month).

In IT, we often plan and predict both ongoing and completed activities. How do you describe your future work or goals?"

Using Future Continuous in IT

"Future Continuous for Ongoing Actions:

1. **For Scheduled Activities:** 'At this time next week, I will be attending a cybersecurity conference.' It's about an action that will be happening at that time in the future.

2. **For Predicting Current Activities:** 'He will be working on the new project, so he might not be available.' It's a prediction about someone's ongoing activity at a specific future time.

In your IT work, when you talk about your future activities or others', how do you choose to use future continuous?"

Using Future Perfect in IT

"Future Perfect for Completed Actions:

1. ****For Completed Activities Before a Specific Time**:** 'By next year, we will have upgraded all our systems.' It shows that the action (upgrading systems) will be completed before that time (next year).

2. ****For Predicting Completion**:** 'By the time the meeting starts, I will have finished the report.' It predicts that an action will be completed before another event or time.

In your IT role, when you anticipate completing tasks or projects, how do you express this completion? Do you use the future perfect tense to highlight the timing?"

Dialogue between IT Professionals

"Let's observe a dialogue between two IT professionals, Kate and Marco, using these tenses:

***Kate**:* Marco, what will you be doing this Friday?

***Marco**:* I will be configuring the new server. Why do you ask?

***Kate**:* I was hoping you could join the client call, but it's okay. By Friday, I will have prepared the project overview.

***Marco**:* I see. By what time will you have sent the overview?

*****Kate**:** I should have it done by Thursday evening.*

*****Marco**:** Great. By next week, we will have finalized most of the setup. We will be testing the server configurations.*

*****Kate**:** Perfect. I'll let the client know that by the end of next week, we will be ready to go live.*

*****Marco**:** Also, by the time we finish, I will have updated our documentation with the new changes.*

This conversation shows Kate and Marco using future continuous to discuss actions they will be doing at a specific time in the future and future perfect to talk about actions that will be completed before a certain time."

Future Continuous in Planning IT Projects

"When planning IT projects, how do you use future continuous to outline your activities? For instance, 'Next month, we will be starting the beta testing of the app.' It conveys that the action (starting beta testing) will be happening at that specific future time.

How do you plan your IT projects? Do you find future continuous helpful for explaining what will be happening and when?"

Future Perfect in Setting IT Goals

"In setting goals or deadlines in IT, how do you use future perfect? For example, 'By the end of the quarter, we will have implemented the new security protocol.' It indicates that the implementation will be completed before the specified deadline.

Consider your recent goals or deadlines. How did you communicate them? Did you use future perfect to emphasize when certain tasks or projects would be completed?"

Dialogue: IT Team Meeting

"Imagine a dialogue in an IT team meeting:

***Ryan**: So, what will everyone be doing next week?*

***Lena**: I will be working on the cloud migration process.*

***Ryan**: Good. And by when will we have moved all the data?*

***Lena**: We should have it all transferred by Wednesday.*

***Ryan**: Excellent. Remember, by Friday, we will have started testing the new system.*

***Lena**: Understood. I will ensure we're on schedule.*

This conversation between Ryan and Lena illustrates how they use the future continuous to discuss upcoming tasks and the future perfect for tasks that will be completed by a specific time."

Future Continuous in IT Task Management

"When we manage tasks in IT, how do we talk about what we or our team members will be doing at a specific time in the future? We use the future continuous tense. For instance, 'Next Monday at 9 AM, I will be updating the

client's website.' It shows that at that particular future time, the action will be in progress.

Now, think about your daily schedule in IT. When you plan your day or week, how do you describe your activities? Do you often say, 'At this time tomorrow, I will be...' to indicate what you will be doing?"

Future Perfect for Project Milestones

"In discussing project milestones, how do we express that certain phases or tasks will be completed by a specific time? We use the future perfect tense. For example, 'By the end of this month, we will have completed the initial phase of the project.' This clearly indicates that the phase completion is anticipated before the specified future time.

Reflect on your current projects. How do you communicate deadlines or milestones? Do you use future perfect to assure your team or clients that certain tasks will be completed by a certain date?"

Engaging with the Audience

"Imagine you are leading an IT project. How would you reassure your team about the progress and upcoming tasks? Would you say, 'Next week, we will be starting the new module development,' using future continuous? And for ensuring that a current task will be completed on time, would you use future perfect, like 'We will have finalized the current module by this Friday'?"

How do these tenses help you in setting clear expectations and maintaining a smooth workflow in your IT projects?"

Personal Teaching Experience

"I recall a session with an IT student who was unsure about using future tenses. He asked, 'In a meeting, should I say 'I will be presenting the report' or 'I will have presented the report'? It was an excellent opportunity to explain the difference between future continuous and future perfect.

I advised him that if his presentation was going to happen during the meeting, he should say, 'I will be presenting the report.' If the presentation was to be completed before the meeting, then 'I will have presented the report' would be appropriate.

In your IT career, have you faced similar challenges in choosing the right future tense? How did you determine which one to use?"

Future Continuous for IT Troubleshooting

"In troubleshooting, especially when predicting how you will spend your time resolving issues, how do you use future continuous? For instance, 'Tomorrow, I will be diagnosing the network problem all day.' It suggests that you will spend the entire day on this task.

Consider your troubleshooting tasks. How do you communicate your plans, especially when they involve dedicating a significant amount of time to a particular issue?"

Future Perfect for IT Achievements

"When you anticipate completing significant achievements in IT, how do you express it? Using future perfect can be very effective. For example, 'By next year, we will have migrated all our databases to the cloud.' It shows confidence that the goal will be reached by that time.

Think about your long-term goals or significant achievements in IT. How do you use future perfect to communicate when you expect to accomplish these goals?"

Dialogue: Planning IT Staff Training

"Let's imagine a dialogue between two IT managers planning staff training:

***Oliver**:* By next month, we will have introduced the new software platform, right?

***Sophia**:* Yes, that's correct. And during that month, I will be conducting training sessions for our staff.

***Oliver**:* Excellent. How long will you have completed the training?

***Sophia**:* We will have covered all the essential modules by the end of the month.

***Oliver**:* Great. I will be coordinating with other departments to ensure everyone is available for training.

***Sophia**:* Perfect. We need to ensure that by the time we go live, everyone will have been adequately trained.

This conversation illustrates how Oliver and Sophia use future continuous to talk about actions they will be doing at specific times in the future and future perfect to discuss actions that will be completed by a certain time."

Continuous Improvement in Communication Skills

"In IT, continuous improvement isn't just about technical skills but also about communication skills. Reflecting on your daily professional interactions, how do

you decide which future tense to use? Do you find certain situations more suited for 'will be doing' and others for 'will have done'?"
