

Lesson 14: Understanding "When I Do" and "When I've Done"; "If" and "When"

Introduction to "When I Do" and "When I've Done"

"Welcome to our lesson. Today, we will explore the use of 'when I do' and 'when I've done' in English, especially how they apply in IT contexts. These phrases help us talk about different timings of actions.

'When I do' is used for future actions that are not yet completed. For example, 'When I do the system check, I'll update you.' It talks about an action that will happen in the future.

'When I've done,' however, is used for actions that will be completed in the future. For instance, 'When I've done the system check, I'll update you.' This implies that the update will happen after completing the system check.

In IT, we often plan and report on tasks. How do you talk about actions that are yet to be done or will be done in the future?"

Understanding "If" and "When"

"Next, let's understand 'if' and 'when.' These words are used for different types of conditions.

'If' is used for conditions that may or may not happen. Like, 'If I find a bug, I'll report it.' It suggests that finding a bug is uncertain.

'When' is used for conditions that are more certain to happen. For example, 'When I finish the analysis, I'll share the results.' It assumes that the analysis will definitely be completed.

In IT, we deal with uncertainties and certainties. How do you differentiate between potential and definite situations in your communication?"

Dialogue between IT Professionals

"Let's see a dialogue between two IT professionals, Alice and Tom, using these expressions:

***Alice**:* Tom, when you do the server maintenance, can you check the backup systems too?

***Tom**:* Sure, Alice. When I've done the maintenance, I'll inspect the backups and let you know.

***Alice**:* Great. And if you encounter any issues, please inform me immediately.

***Tom**:* Of course. If there are any problems, I'll call you right away.

***Alice**:* Thanks. I'm counting on you because when the server is back up, we need to ensure everything is running smoothly.

***Tom**:* Don't worry. When I finish, everything will be in top condition.

***Alice**:* Also, if the backup system needs any updates, let's discuss them.

***Tom**:* Will do. If I find that updates are necessary, I'll prepare a report.

This conversation shows how Alice and Tom use 'when I do' and 'when I've done' to discuss future actions and their completion, and 'if' and 'when' to talk about potential and definite situations."

Using "When I Do" and "When I've Done" in IT Task Management

"When managing IT tasks, how do we communicate about actions we plan to undertake and their completion? 'When I do' is for actions we will start in the future, like 'When I do the network analysis, I might need additional resources.' 'When I've done' is for after the action is completed, such as 'When I've done the analysis, I'll present the findings.'

How do you plan and report your IT tasks? Do you use these phrases to clearly delineate between starting an action and completing it?"

Differentiating "If" and "When" in IT Scenarios

"In IT scenarios, how do we differentiate between uncertain and certain situations? We use 'if' for possibilities, like 'If the system crashes, we have a recovery plan.' We use 'when' for more definite situations, like 'When the system is upgraded, it will perform better.'

Think about your recent work scenarios. How did you communicate about possible issues and certain updates or changes?"

Dialogue: IT Project Planning

"Imagine a dialogue in an IT project planning meeting:

***Nadia**: When we start the migration process, we need to minimize downtime.*

***Erik**: Absolutely. When I've done the preparatory work, I'll schedule the migration during off-peak hours.*

****Nadia**:** *Good thinking. And if we encounter data loss, what's our backup plan?*

****Erik**:** *If that happens, we'll revert to the last stable backup. I've ensured it's up to date.*

****Nadia**:** *Excellent. Let's hope we won't need it, but it's good to be prepared.*

****Erik**:** *Indeed. I always plan for such scenarios. When the migration is complete, I'll conduct a thorough check.*

****Nadia**:** *Perfect. I trust your planning. If anything unexpected comes up, just let me know.*

****Erik**:** *Will do. I'll keep you informed every step of the way.*

This conversation demonstrates how Nadia and Erik use 'when I do' and 'when I've done' for future actions and their completion and 'if' and 'when' to discuss possible and definite situations in their project planning."

Future Continuous in Anticipating IT Tasks

"Considering future tasks in IT, how do you talk about what you will be doing at a specific time? We often use the future continuous tense. Like, 'This time tomorrow, I will be analyzing the server data.' It gives a clear picture of the ongoing action at a particular future time.

When you anticipate your workload or plan your schedule, how do you describe what you will be doing at specific future times? Do you find the future continuous tense helpful for such descriptions?"

Future Perfect for IT Project Completion

"Discussing the completion of IT projects or tasks, how do we use the future perfect tense? For instance, 'By the end of this week, we will have updated all client databases.' It indicates that the updating process will be complete before the week ends.

Reflect on your project timelines. How do you communicate the expected completion of key milestones? Does the future perfect tense help in setting clear deadlines?"

Dialogue: Future IT System Upgrades

"Let's visualize a dialogue focusing on future IT system upgrades:

***Brian**: Lena, when you upgrade the system next week, will you also check the firewall settings?*

***Lena**: Yes, Brian. When I've upgraded the system, I'll review all security settings.*

***Brian**: Excellent. And if you find any vulnerabilities, what will you do?*

***Lena**: If I spot any issues, I will update the security protocols immediately.*

***Brian**: Great. Remember, by next Friday, we will have completed all scheduled upgrades.*

***Lena**: Understood. I'll make sure everything is on track.*

***Brian**: Also, if there are delays, let's discuss how to handle them.*

***Lena**: Of course. If any delays occur, I'll inform you right away.*

This conversation between Brian and Lena uses 'when I do' and 'when I've done' for discussing the commencement and completion of actions, and 'if' and 'when' for potential and certain scenarios."

Enhancing Communication in IT

"In our field of IT, communicating effectively about our plans, tasks, and contingencies is vital. Understanding the nuances of phrases like 'when I do' and 'when I've done,' as well as 'if' and 'when,' can greatly improve our ability to convey our messages clearly and accurately.

How often do you find yourself using these expressions in your daily IT work? Have you noticed how they can enhance the clarity and precision of your communication?"

Applying 'When I Do' in IT Scenarios

"Think about a situation in IT where you need to plan a task. How do you communicate about actions you will do in the future? We often use 'when I do' for such instances. For example, 'When I do the system upgrade, I will ensure minimal downtime.' It implies a future action yet to be started.

Now, consider your daily work in IT. When you discuss upcoming tasks with your team, how often do you use 'when I do'? Does it help in setting clear expectations for future tasks?"

The Importance of 'When I've Done' for IT Projects

"Let's focus on project completion. How do we talk about tasks after they are completed? We use 'when I've done' to describe actions that will be completed in the future. Like, 'When I've done the data analysis, I'll share the insights with the team.' It signals the completion of an action before the next step.

In your IT projects, when you report on progress or next steps, how do you use 'when I've done'? Does it help to clarify the sequence of your activities?"

Differentiating 'If' and 'When' in Uncertain IT Situations

"In IT, we often face uncertain situations. How do we differentiate between actions that might happen and those that are certain? We use 'if' for possibilities and 'when' for certainties. For instance, 'If we encounter any errors, we'll troubleshoot immediately,' versus 'When the testing is complete, we'll deploy the software.'

How do you decide to use 'if' or 'when' when discussing potential issues or certain plans? Do you find that this distinction helps in preparing for different scenarios?"

Engaging with Your Audience

"Imagine you are planning a new IT initiative. How would you discuss this with your team? Would you say, 'When I do the initial assessment, I'll identify the key areas for improvement'? How would you convey the completion of a phase, 'When I've done the assessment, we'll discuss the findings'?"

How do these phrases help you in effectively communicating the stages and completion of your IT tasks?"

Personal Teaching Experience with 'If' and 'When'

"I remember an online class with an IT professional who was unsure about using 'if' and 'when.' He asked, 'In a project update, should I say 'If I have completed the task' or 'When I have completed the task'? ' This question led to a crucial lesson on context.

I explained that 'If I have completed the task' implies uncertainty about task completion, while 'When I have completed the task' suggests certainty that the task will be done. It's important in IT to convey the right level of certainty or uncertainty.

Have you experienced similar confusion in choosing between 'if' and 'when'? How did you resolve it?"

Using 'When I Do' for Future IT Meetings

"Consider a scenario where you need to schedule a future meeting or discussion in IT. How do you communicate this? You might say, 'When I do the system check tomorrow, I'll call a meeting to discuss the results.' It sets a clear plan for a future action.

In your experience, how effective is the use of 'when I do' in scheduling and planning IT-related meetings or discussions?"

'When I've Done' for Reporting IT Progress

"When reporting progress in IT, how do we indicate the completion of certain stages or tasks? We often use 'when I've done' to signal that a task will be completed before reporting. For example, 'When I've done the network analysis, I'll present the potential solutions.'

How do you use 'when I've done' in your progress reports or updates? Do you find it helpful in indicating the completion of tasks before discussing the next steps?"

Dialogue: Future IT Strategy Meeting

"Let's visualize a dialogue in an IT strategy meeting:

***Grace**: When we launch the new system, what are the key steps, Jack?*

***Jack**: When I do the final review, I'll ensure all security protocols are in place.*

***Grace**: And if we face any user resistance?*

***Jack**: If that happens, I've planned a series of user training sessions.*

***Grace**: Great. And when will you have completed the user manuals?*

***Jack**: I will have done them by the end of next week.*

***Grace**: Perfect. Let's make sure when we do the launch, everything is flawless.*

***Jack**: Absolutely, I'll double-check everything. When I've done the final review, we'll be ready to go.*

This conversation between Grace and Jack shows how they use 'when I do' and 'when I've done' to discuss future actions and their completion, and 'if' and 'when' to talk about potential issues and definite plans."

Continuous Improvement in IT Communication

"In IT, as well as in language learning, adapting our communication to suit different contexts is crucial. Reflecting on your daily professional interactions, how do you choose between 'when I do' and 'when I've done,' or 'if' and 'when'? How do these choices impact the clarity and effectiveness of your communication in IT?"
