'If I had known' is used for situations that did not happen because you did not have specific information or knowledge at that time. 'I wish I had known' expresses regret over not having certain knowledge or information in the past. For instance, 'I wish I had known about the software update issues; I would have delayed the installation.' It shows a longing for having had specific knowledge earlier.

In the IT industry, where decisions often depend on accurate information and knowledge, how do you usually reflect on situations where having prior knowledge could have changed the outcome?"
