

Lesson 25: Passive Voice (Be Done, Been Done, Being Done)

Introduction to Passive Voice Forms in IT

"Welcome, everyone. Today, we will explore the passive voice, specifically the forms 'be done,' 'been done,' and 'being done' in the context of IT. These forms are essential for emphasizing actions rather than the doers, which is often important in technical fields like IT.

'Be done' is used for actions that will be completed in the future. For instance, 'The system upgrade will be done next week.' It focuses on the future completion of an action.

'Been done' is the passive form used in perfect tenses to talk about actions that were completed before now. 'The software update has been done.' This suggests the action was completed in the past.

'Being done' is used for ongoing actions in the passive voice. For example, 'The data is being analyzed currently.' It highlights an action that is happening at the moment.

In the IT field, where processes and results often take center stage, how do you find yourself using these different passive forms? Do they help you focus on the actions being discussed rather than who is performing them?"

Different Ways to Use Passive Voice in IT

"Using 'Be Done' for Future Actions:

1. ****For Future Scheduled Actions****: 'The server maintenance will be done over the weekend.' It indicates a planned action.

2. ****For Announcing Future Plans****: 'New security measures will be done soon.' It informs about upcoming activities or changes.

Using 'Been Done' for Completed Actions:

1. ****For Actions Completed in the Past****: 'The system upgrade has been done.' It states that the action is already complete.

2. ****For Emphasizing Completion****: 'All tests have been done, and the software is ready.' It highlights the completion of a series of actions.

Using 'Being Done' for Ongoing Actions:

1. ****For Current Activities****: 'Data analysis is being done by the new software.' It describes what is happening now.

2. ****For Describing Processes****: 'Bug fixes are being done currently.' It focuses on ongoing processes or activities.

In your daily IT operations, which of these forms do you use most frequently? How do they assist in conveying the status of tasks and projects?"

Dialogue between IT Professionals

"Let's observe a dialogue between two IT professionals, Alex and Mia, using these passive forms:

****Alex****: Mia, has the network upgrade been done yet?

****Mia****: Yes, it was completed yesterday. Now, the security check is being done to ensure everything is secure.

****Alex****: Great. When will the new software installation be done?

***Mia**: The installation is scheduled for next Tuesday. All preparations have been done, so we should be ready by then.*

***Alex**: Perfect. I heard that the data migration is being done at the moment. How's that going?*

***Mia**: It's in progress. It's being done carefully to avoid any data loss.*

***Alex**: Also, the client asked if the report had been done.*

***Mia**: Yes, it's been done and sent to them this morning.*

***Alex**: Excellent. It's good to know everything is being handled efficiently.*

***Mia**: Yes, staying on top of things is important for us.*

This conversation shows how Alex and Mia use 'be done,' 'been done,' and 'being done' to discuss various actions related to IT tasks, focusing on the timing and completion of these actions."

'Be Done' in Future IT Planning

"When planning future IT tasks or projects, 'be done' is particularly useful. It helps in setting clear expectations for when tasks will be completed. For instance, 'The cybersecurity upgrade will be done by the end of the quarter.'

Think about your project timelines. How do you use 'be done' to communicate about future tasks and deadlines?"

'Been Done' in IT Reporting

"In reporting on completed IT tasks, 'been done' is a common phrase. It provides a concise way to convey that tasks or projects have been completed. For example, 'All scheduled tests have been done, and the application is functioning as expected.'

Reflect on your reporting methods. How does 'been done' help you in summarizing completed work?"

'Being Done' in Describing Current IT Processes

"'Being done' is vital for describing ongoing actions or processes in IT. When talking about current operations or tasks, saying 'The database is being backed up at the moment' focuses on the ongoing action.

Consider your current IT operations. How does 'being done' assist in conveying real-time progress and activities?"

Enhancing IT Communication with Passive Voice

"In IT, clear and precise communication is crucial. The passive voice, particularly 'be done,' 'been done,' and 'being done,' can enhance your ability to focus on the tasks, processes, and results. These forms allow you to highlight what is being done, has been done, or will be done, irrespective of the person doing it.

How do you plan to incorporate these passive forms in your communication? Are there specific situations in IT where you find one form more useful than the others?"

The Significance of 'Be Done' in Future IT Projects

"In your experience, how often do you find yourself planning future IT projects? In these situations, the phrase 'be done' plays a crucial role. For example, when scheduling future updates or installations, you might say, 'The network upgrade will be done next month.' This emphasizes the action rather than who is performing it, making it clear and impersonal.

Do you often use 'be done' in your project timelines? How does it help in setting clear expectations for the completion of tasks?"

Utilizing 'Been Done' in IT Reporting and Documentation

"Think about the last time you had to report on a completed project or document a finished task. Using 'been done' in such reports, as in 'The software installation has been done,' provides a concise and clear way of conveying completion. It shifts the focus from the individuals to the task itself.

How do you incorporate 'been done' in your reports or documentation? Does it help in maintaining objectivity and focusing on the results?"

'Being Done' in Managing Ongoing IT Operations

"Consider how you communicate about ongoing tasks in your IT department. The use of 'being done' in phrases like 'The data is currently being processed' helps in highlighting the ongoing nature of the task. It's a useful tool for updating colleagues or clients on the progress of ongoing operations.

In your daily updates or team meetings, how frequently do you use 'being done'? Do you find it effective in conveying the current status of operations?"

Personal Experience: Clarifying Passive Voice in IT Context

"As an online English teacher, I once had a student who worked as an IT manager and struggled with using passive voice effectively in his reports. He wasn't sure when to use 'be done,' 'been done,' or 'being done.' We worked on several examples. For future actions, 'The server maintenance will be done by the IT team' was appropriate. For completed actions, 'The new software has been installed' was correct. And for ongoing actions, 'The data is being analyzed' was suitable.

Have you encountered similar challenges in choosing the right passive form? How did you address them to ensure clarity in your communication?"

'Be Done' in IT Project Proposals

"When proposing new IT initiatives, 'be done' can be instrumental in describing future actions without specifying who will perform them. 'The system analysis will be done before the next phase begins' clearly sets out what will happen, focusing on the task rather than the doer.

How do you use 'be done' in your project proposals? Does it assist in providing a clear and concise description of future actions?"

The Role of 'Been Done' in IT Audits and Reviews

"In audits and project reviews, 'been done' is essential for discussing completed actions. It helps in focusing on what was accomplished, such as 'A thorough review of the network security has been done.'

Reflect on your last audit or review. How did the use of 'been done' help in presenting a clear picture of the actions that had been completed?"

'Being Done' for Real-Time IT Support

"In IT support, conveying real-time updates is key. Using 'being done' helps in such scenarios. For example, telling a client, 'Your issue is being looked into right now,' reassures them that action is being taken at the moment.

How do you use 'being done' in providing IT support? Does it help in communicating ongoing efforts effectively?"

Enhancing Communication Skills with Passive Voice

"In IT, where clarity and precision are paramount, mastering the passive voice is a valuable skill. It allows for a focus on actions and results, which is often more relevant than who is performing the action. Whether it's 'be done' for future actions, 'been done' for completed tasks, or 'being done' for ongoing processes, these forms are vital tools in your communication arsenal.

How do you plan to use these passive forms in your professional communication? Are there specific IT scenarios where you find one form more effective than the others?"

Applying Passive Voice in Professional IT Scenarios

"Applying passive voice in professional IT scenarios is crucial for effective communication. Whether you're discussing future projects, reporting on completed tasks, or updating on ongoing operations, using 'be done,' 'been done,' and 'being done' can significantly enhance the clarity and focus of your communication.

In your day-to-day IT tasks, how will you apply what you've learned about the passive voice? How can it enhance your ability to communicate effectively in various professional contexts?"
