

Lesson 27: Reported Speech (He Said That...)

Introduction to Reported Speech in IT

"Hello, welcome to our lesson on reported speech, focusing on the structure 'he said that...' This form is frequently used in IT to relay information, instructions, or statements made by others. Reported speech is useful for sharing what someone said without quoting them directly.

'He said that...' is used to report what someone has said. For example, 'He said that the server would be down for maintenance tonight.' This shifts the statement from direct speech to indirect or reported speech.

In IT, where communication about updates, issues, or instructions is crucial, how do you usually convey messages from others? Does using reported speech help in relaying information accurately?"

Different Ways to Use Reported Speech in IT

"Using 'He Said That...' for Reporting Information:

1. ****For Relaying Instructions****: 'He said that we need to update our passwords regularly.' It communicates instructions given by someone else.
2. ****For Sharing Updates****: 'He said that the new software will be launched next month.' It is used to relay information about future plans or updates.

In your IT work, how often do you find yourself using reported speech to share information or instructions from others? Do you find it effective for clear communication?"

Dialogue between IT Professionals

"Let's examine a dialogue between two IT professionals, Tom and Sarah, using reported speech:

***Tom**: Sarah, I spoke with the boss this morning. He said that the cybersecurity budget has been increased.*

***Sarah**: Oh, that's good news. He also said that we should prioritize data encryption.*

***Tom**: Right. And he mentioned that the new cloud storage solution will be implemented soon. He said that it would enhance our data accessibility.*

***Sarah**: Yes, I heard about that too. He said that the training sessions for the cloud system are being scheduled.*

***Tom**: Additionally, he said that our team would handle the migration process.*

***Sarah**: That's a big responsibility. He also said that we need to complete it before the next quarter.*

This conversation shows how Tom and Sarah use reported speech to relay information and instructions from their boss, focusing on what was said rather than how it was said."

'He Said That...' in IT Meetings

"When discussing previous meetings or communications in IT, 'he said that...' is a common way to summarize what was discussed. For instance, 'In yesterday's meeting, he said that the network security needs to be strengthened.'

Think about your recent meetings. How do you use reported speech to summarize key points or decisions for those who were not present?"

'He Said That...' in Email Communication

"In email communication within IT, reported speech is often used to convey messages from one person to a wider group. For example, 'In his email, he said that all employees must complete the cybersecurity training.'

Reflect on your email communications. How does reported speech help in relaying information from emails to your colleagues?"

Enhancing IT Communication with Reported Speech

"In IT, effective communication is key to ensuring that teams are informed and aligned. Using reported speech, particularly 'he said that...', can greatly enhance your ability to communicate information accurately and efficiently. It allows you to share what others have said in a way that is clear and concise.

How do you plan to use reported speech in your professional communication? In what situations do you find it particularly useful?"

The Relevance of 'He Said That...' in IT Collaboration

"When collaborating in IT projects, how often do you rely on information shared by others? The use of reported speech, particularly 'He said that...', is vital in such situations. It allows you to convey messages from team leads, clients, or colleagues accurately. For instance, 'He said that the project deadline has been extended.' This form of speech is crucial in ensuring that

everyone on the team has the correct information, even if they weren't present at the original conversation.

Reflect on your recent project collaborations. How did reported speech play a role in ensuring effective communication among team members?"

Reported Speech in IT Problem-Solving

"In IT, problem-solving often involves gathering information from various sources. How do you integrate this information into your problem-solving process? Reported speech comes into play here as well. 'Our network administrator said that the system vulnerability was identified last week.' Using reported speech in this way helps you compile information from different times and sources into a coherent narrative that can be used to address the problem effectively.

Can you think of a situation where reported speech helped you piece together information to solve an IT issue?"

Personal Experience: Clarifying Misunderstandings with Reported Speech

"As an online English teacher, I once had a student working in IT who faced a misunderstanding due to a miscommunication during a meeting. He was not sure how to clarify it in an email to his team. We discussed how to use reported speech to accurately convey what was originally said without altering the meaning. 'In the meeting, our manager said that the software testing phase would start next week, not this week.' This clarification helped resolve the confusion.

Have you ever encountered a situation where using reported speech helped clarify a misunderstanding within your team? How did it impact the outcome?"

The Role of Reported Speech in IT Documentation

"Consider the last time you had to document a process or a meeting in IT. How did you relay the information said by others? 'In the review meeting, it was said that the current approach to data encryption needs improvement.' This use of reported speech helps to document discussions or decisions without attributing the statement to a specific individual, keeping the focus on the content rather than the speaker.

How does reported speech contribute to the clarity and accuracy of your IT documentation?"

Reported Speech in IT Training and Knowledge Sharing

"In IT training sessions or when sharing knowledge with peers, how do you convey information that you learned from others? Using reported speech here can be very effective. 'Our lead developer said that understanding cloud infrastructure is crucial for this project.' It allows you to pass on valuable insights and knowledge while clearly indicating the source.

Think about your last training or knowledge-sharing session. How did you use reported speech to share insights or information?"

Enhancing Communication Skills with Reported Speech

"In the field of IT, where accurate and clear communication is essential, mastering reported speech is a valuable skill. It allows you to convey information, instructions, and insights shared by others effectively. Whether it's 'He said that...' for conveying messages from superiors or 'In the meeting, it was said that...' for documenting decisions, these constructions are integral to your communication toolkit.

How do you plan to use reported speech in your professional communication?
Are there specific IT scenarios where you find it particularly useful?"

Applying Reported Speech in Professional IT Scenarios

"Applying reported speech in professional IT scenarios is key to effective communication. Whether you're discussing project updates, clarifying instructions, documenting meetings, or sharing knowledge, using 'He said that...' and similar constructions can significantly enhance the clarity and accuracy of your communication.

In your day-to-day IT tasks, how will you apply what you've learned about reported speech? How can it enhance your ability to communicate effectively in various professional contexts?"
