

Lesson 37: Relative Clauses with and without Who/That/Which

Introduction to Relative Clauses in IT

"Hello and welcome to our lesson. Today, we are going to explore relative clauses in English, focusing on their use with and without 'who,' 'that,' and 'which' in an IT context. Relative clauses are a vital part of English grammar, allowing us to provide more information about a noun without starting a new sentence.

****Relative clauses with 'who,' 'that,' or 'which'**** add essential information about the noun. For example, 'The programmer who fixed the bug is very skilled.' Here, 'who fixed the bug' is a relative clause adding information about 'the programmer.'

****Relative clauses without 'who,' 'that,' or 'which'**** often provide extra, non-essential information. For instance, 'Our latest project, developed using new technology, is very successful.' The clause 'developed using new technology' gives additional information about 'our latest project.'

In your work in IT, how do you use relative clauses? Do you find them helpful in providing more detailed information in your conversations or writing?"

Different Ways to Use Relative Clauses in IT

"Using **Relative Clauses with 'Who,' 'That,' or 'Which':**

1. ****To Specify****: 'The server that crashed yesterday is now operational.' Here, 'that crashed yesterday' specifies which server.
2. ****To Define****: 'The software, which we recently updated, has new features.' 'Which we recently updated' defines the software being talked about.

Using ****Relative Clauses without 'Who,' 'That,' or 'Which'****:

1. ****For Additional Information****: 'Our database, backed up regularly, is very secure.' The clause 'backed up regularly' provides extra information.
2. ****For Descriptions****: 'The new intern, coming from a programming background, is quick to learn.' 'Coming from a programming background' describes the intern.

How do you incorporate these types of clauses into your IT communications? Do they add clarity and depth to your explanations?"

Dialogue between IT Professionals

"Let's look at a dialogue between two IT professionals, Mark and Zoe, to see how they use relative clauses:

****Mark****: Zoe, have you met the new team member who joined us last week?

****Zoe****: Yes, I have. Jake, who has extensive experience in cybersecurity, seems like a great addition to the team.

****Mark****: That's good to hear. What about the project that we are supposed to complete by next month?

****Zoe****: The project, which involves developing a new application, is on track.

****Mark****: Also, the computer I was using, which had all my files, suddenly stopped working.

****Zoe****: Don't worry. The technician, coming in today, will take a look at it.

Mark: Perfect. By the way, the meeting room, located on the second floor, is free if you need it.

Zoe: Thanks, I might use it for a call later.

This conversation demonstrates how Mark and Zoe use relative clauses with and without 'who,' 'that,' and 'which' to provide specific and additional information in their IT-related discussion."

'Relative Clauses with Who/That/Which' in IT Problem Solving
